DETAILED ACTION

Allowable Subject Matter

Claims 17-24 and 26-29 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 17, the prior art, as best exemplified by US 6,138,046 to Dalton, discloses a method of forming a medical device comprising the steps of: providing an optical fiber core having a proximal end and a distal face; associating the proximal end of the core with an optical connector; enclosing the fiber core in a continuous, uninterrupted sleeve, wherein the sleeve has a length at least substantially the length of the optical fiber core extending from the optical connector to at least the distal face of the optical fiber core (Figure 1, column 8, lines 28-38 and column 9, lines 61-67). Dalton also teaches forming a tip in the sleeve, the tip being disposed distal of the distal face of the optical fiber core (column 13, line 7 – column 14, line 18). However, Dalton, either alone or in combination with the prior art, fails to disclose or render obvious that the tip is closed.

Claims 19-23 are allowed due to dependence from claim 17.

Regarding claim 18, the prior art, as best exemplified by Dalton, discloses a method of forming a medical device comprising the steps of: providing an optical fiber core having a proximal end and a distal face; associating the proximal end of the core with an optical connector; enclosing the fiber core in a continuous, uninterrupted sleeve, wherein the sleeve has a length at least substantially the length of the optical fiber core

extending from the optical connector to at least the distal face of the optical fiber core (Figure 1, column 8, lines 28-38 and column 9, lines 61-67). However, Dalton, either alone or in combination with the prior art, fails to disclose or render obvious an optical coupling layer intermediate a portion of the sleeve and a distal portion of the optical fiber core.

Regarding claim 24, the prior art, as best exemplified by US 6,315,775 to Thielen, discloses a method of making a device comprising the steps of: exposing a distal portion of an optical fiber; providing an optical coupling layer intermediate the distal portion of the optical fiber core and the sleeve; and forming a closed, tissue penetrating tip disposed distal of the distal portion of the fiber core (abstract, column 2, lines 43-45 and 64-66, column 3, lines 25-27, and Figure 1). However, Thielen, alone or in combination with the prior art, fails to disclose or render obvious that the penetrating tip is located in the sleeve.

Claims 26-29 are allowed based on dependence from claim 24.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
